Machine Learning Based Vehicle Performance Analyzer

To predict the performance of vehicle and provide the efficiency of the vehicle .

Journey Step	customer needs to satisfy	customer reaches out online to check the specification of the vehicle	customer gives the data of the vehicle	customer can enter value at anytime for prediction	Uploading the values that are given as report

Feeli ng

Goals and motivation	To predicate the performance of the vehicle	comfort and safety	feøÄ		Predict the performance of vehicle in efficient manner

Internal ownership	No cost to predict the performance of the vehicle	Value prediction should be accurate	Using different algorithm for development of model	more training data should be provided	No time delay
What measures should be taken in this step from the service side?
